

## Summary

Data Engineer with a total of 2.2 years of experience, building and optimizing scalable ETL pipelines. Experienced in **AWS and Azure Services, Databricks, and PySpark** for processing enterprise data in ADLS/S3 and Delta Lake. Strong background in **Big Data, GenAI, NLP, Data Modeling, Distributed Systems, CI/CD, and PostgreSQL**.

## Skills

**Languages:** Python, SQL, C, CPP, Go-Lang

**Databases:** PostgreSQL, MySQL

**Architecture & Concepts:** Big Data, System Design, GenAI, RAG, Agile, CDC/CDF

**Cloud & Data Services:** Azure Data Factory (ADF), Azure Synapse Analytics, Azure Key Vault, Azure Storage account, Azure DevOps, Azure Cosmos DB, Microsoft Fabric, Azure Databricks

AWS - EMR, S3, EC2, RedShift, Relational Databases

## Experience

### Data Engineer | Reliance Jio Infocomm Limited

May 2023 – June 2025

#### Reliance Smart - Retail

- Monitored, maintained, and troubleshoot ETL Pipeline based on Azure Data Factory for orchestration, Azure Databricks for processing, and Delta Live Tables (Databricks Declarative Pipelines) to reliably ingest 10GB+ of multi-source retail and enterprise data into Azure Data Lake for downstream analytics.
- Optimized Apache Spark jobs by 30% through performance tuning techniques, including partition optimization, caching, and query optimization, and efficient join methods.
- Designed and implemented a Medallion Architecture (Bronze, Silver, and Gold) using Databricks Unity Catalog to build a governed Lakehouse platform. Developed a near real-time ingestion framework for scalable, reliable, and efficient data ingestion across multiple data layers.
- Automated data quality validation frameworks to verify schema consistency, null handling, duplicate detection, and business rule compliance across retail data pipelines.
- Implemented Azure Synapse Analytics as the enterprise data warehouse to support scalable reporting and business intelligence.
- Used Azure DevOps for sprint planning, task tracking, and Agile collaboration; managed user stories and tasks, participated in daily stand-ups, sprint reviews, and retrospectives, and contributed to capacity planning and workload balancing.

#### ECourts Of India - Gov. Client [\(Github\)](#)

- Participated in planning and use story grooming, data modeling, and execution of an analytical pipeline for the judicial system at the district and state level leveraging Azure Data Factory, Databricks, Power BI and Synapse Analytics.
- Built a scalable PySpark data transformation framework leveraging Delta Lake using Databricks UniForm to ensure consistent, varied user, high-quality datasets for judicial analytics.
- Developed CI/CD pipelines using Azure DevOps to automate the deployment of Azure Data Factory pipelines, Databricks notebooks, and related project artifacts across environments.
- Used Azure DevOps for sprint planning, task tracking, and Agile collaboration; managed user stories and tasks, participated in daily stand-ups, sprint reviews, and retrospectives, and contributed to capacity planning and workload balancing.

### Data Science Intern | Indian Institute of Tropical Meteorology - Pune

Jun 2022 – Jan 2023

- Processed and transformed large-scale meteorological datasets using Python, OpenCV, and Tobac, while migrating legacy R-based workflows to Python to improve scalability and maintainability.
- Developed machine learning-based cloud identification and trajectory prediction models using K-Means clustering and computer vision techniques, contributing to research on automated cloud detection and tracking.

## Education

**G.H. Rasoni College of Engineering and Management, Pune**  
B.Tech - Computer Engineering — CGPA: 8.7

2019 – 2023
